RTW after home exposure

What is your test result?

Are you or have you been able to self-isolate at home or in a hotel?*

Positive

Negative

Quarantine until your last COVID positive household contact has had 10 days (20 days if household contact is immunocompromised) since symptom onset with improvement in symptoms or has it been 10 days since they tested positive if not symptomatic

Are you one of the following?
- A student
- Working remotely
- Non-critical to clinical operations

Yes

Self-quarantine for 14 days since last exposure to household contact

No

Go back to work with mask and continue to self-monitor for symptoms. Self-isolate at home (or referral to hotel or alternative location) for 14 days since last exposure to household contact
